

IOVIO Tech Challenge - Retail

The Challenge

The task is to create **an automated E2E test suite for any retail ecommerce website** of your choosing (for example <https://www.hugoboss.com>)

- Browser support: Google Chrome
- The test suite should support desktop and mobile versions of the website. For mobile tests please use Chrome mobile emulation.
- Scenarios to include:
 1. Verify that guest user can reach payment checkout and validate credit card fields
 2. Verify that guest user can create an account with valid data
- Technologies: The assignment can be developed in any framework/tool of your choice. Our preferred stack: TypeScript/JavaScript, WebdriverIO, Cucumber.

Submission Guidelines:

- Submit your assignment as a link to your public git repository.
- Include a README with instructions on how to run tests (test suite), together with any additional information you consider appropriate (assumptions, design decisions made, etc.)
